Environmental Protection Agency, Office of Research and Development, Environmental Health Systems Research Program, which is a voluntary program. The NPEP program is focused on promoting source identification and identifying existing and potential alternatives to existing technology.

Organization of the program is based on the following priorities of priority and other

With the help of the community, the program will identify and control the facility.

While 2 lbs of mercury may not seem like much, we should point out that this can be very dangerous.

The amount of mercury at the Symmetry site is a significant environmental and economic problem. The mercury is a danger to both the environment and human health.

See attached for more information regarding the mercury.

For further information, contact the Michigan Department of Environmental Quality, 1400 Townsend Drive, Lansing, Michigan 48911.
